Experienced GIS and Geocomputing Software Consulting Services

Granber Solutions provides expert software development, GIS, and geodatabase consulting services.

What We Do: Granber helps mining, environmental assessment teams, and oil and gas companies that must have the highest level of assurance that their prospecting and mining operations decisions are based upon flawless data, measurements and results.

Our **software consulting** services improve workflow for data entry, analysis and reporting of geologic data, to minimize staffing, costs and delays.

We also provide turnkey **data preparation, digitizing and visualization services** for mapping, GIS, and 3D subsurface geologic data.

Please review our web site to find the service that you need for your natural resources exploration or assessment project.

GIS and Cartography

Granber Solutions offers a comprehensive set of Geographic Information Systems(GIS) services and products. We utilize industry standard software from ESRI, Golden Software, TatukGIS, and Adobe. Our services include GIS project management, presentation map products, custom GIS software development, and hands-on training courses.   More >>>

Geocomputing

Granber Solutions consultants have been involved in Geoscience computing for over twenty years. We have extensive experience using Geoscience software applications to create custom cross sections, borehole diagrams, contour maps, 3D models, 2D graphs, and geologic maps. We have extensive experience loading and utilizing the best commercial geoscience data products. Our strategic relationships include WhiteStar, Petroleum Geogrpahics, DrillingInfo, Divestco, Rextag, Tobin, and IHS. More >>>

Software Development and Database Design

Granber Solutions has the experience and knowledge to assist in developing custom geoscience software solutions. We are well versed at using the latest software development tools and technologies from Microsoft, ESRI, and TatukGIS. We also have experience developing customized database solutions using Microsoft Access and SQL Server.

Let us help with the analysis, design, and implementation for your next software project. Click here to read more about our comprehensive software services.
