Mobile and Handheld Development using .NET

Mobile devices such as PDAs, smart cell phones, and other small form factor devices give you rugged and highly portable computing power that can be used out in the field.

Website Development

Granber Solutions is right out in the field with you to support the latest mobile technology. We will help you to make use of this powerful new technology and to help you create new ways to collect and process data in the field to support your prospecting, drilling or mining operation.

Granber Solutions can create a complete custom solution for your mobile data gathering or GPS navigational needs. We use the leading mobile application software development tools on the market, including:

- Windows Mobile OS
- .Net Compact Framework
- ArcPad Application Builder by ESRI
- SQL Server Compact Edition

Granber Solutions can create a complete software system that integrates both mobile data gathering functionality with a desktop based application for the post-processing requirements. We are experienced with all types of Geoscience and GIS file types and we can solve your most difficult data management problems.
